Subject: potential equipment to assist for current truck convoy issue

Hi Emily,

Further to our conversation earlier, these are the equipment or items you might consider to assist this situation.

-1 school bus at fire station 4, key with commanding officer
-18 jersey barrier at our yard. (lead time to deploy without prewarning would be 2 hours) If you are anticipating immediate, let me know and I will put people sitting in idling
-200 jersey barriers at contractor yard- This will need a plan for this operations. They will need to float heaving machinery to location to put in place. The Tunnel for example will need a day minimal to setup

We do have other vehicles like salter and tractors but rather not use as these might get damage and I need them for other operations. I can make arrangement for moving of blockages but I need to know what I am dealing with and I can make arrangement for the right equipment.

My cell phone is always available, please call me at [redacted] if needed. If it is emergency, please call directly as Text and Email might be missed.
